**Subject:** RE: TCT Agenda Question

As far as the FS is concerned, we have solved the benthic risk issues. We are using the LRM L2 & L3 and the bioassay L2 & L3 to form the footprints. We are going to use the PECs in the long-term evaluation as EPA cannot develop site-specific numbers from the data collected by the LWG. We are looking into the possibility of allowing the PRPs to develop site-specific RGs, but this would be part of the PP & ROD. We would be specific in how that would be accomplished and Jenn may want to review that part.

Hi Kristine,

Jennifer noted that the EPA team is still working through benthic risk/FS issues. Please let her and I know if you decide to discuss this at the TCT so she can plan on participating.

Thanks,

Matt McClincy
